

Data sampled from $\mathcal{N}(x|\mu = 1.0, \sigma = 0.2) \, dx$:

Individual Likelihoods $\mathcal{L}_i(\mu) = \mathcal{N}(x_i|\mu, \sigma = 0.2)$,

$$\text{Likelihood } \mathcal{L}(\mu) = \prod_{i=1}^{10} \mathcal{L}_i(\mu) = \prod_{i=1}^{10} \mathcal{N}(x_i|\mu, \sigma = 0.2)$$
