

x_i = data sampled from $\text{pdf}(x|\mu, \sigma) \text{d}x = \mathcal{N}(x|\mu=1.0, \sigma=0.2) \text{d}x$:

Individual Likelihoods $\mathcal{L}_i(\mu) = \text{pdf}(x_i|\mu, \sigma=0.2) = \mathcal{N}(x_i|\mu, \sigma=0.2)$,

Likelihood $\mathcal{L}(\mu) = \text{pdf}(\{x_i\}|\mu, \sigma=0.2) = \prod_{i=1}^{10} \mathcal{L}_i(\mu) = \prod_{i=1}^{10} \mathcal{N}(x_i|\mu, \sigma=0.2)$
